E-MOBILITY Symposium

# E-Mobility – A Challenge on Standardisation, Sustainability and Safety

TÜV®

---

# E-MOBILITY Symposium

## Invitation

Transport accounts for 25% of CO<sub>2</sub> emissions and 73% of all oil consumed in Europe. There is a growing appreciation of the impact that city and regional authorities can have in making practical preparations for an electrified road transport system. A combination of safety and sustainability issues and the need to cut greenhouse gas emissions in order to curb climate change and air pollution means a commitment is needed from all of us to develop the most environmentally-friendly transport options and use them.

Being one of the largest, widest ranging technology services and testing companies, TÜV NORD AG monitors and adapts to technical innovation dedicating their work from the early development until the very last implementation.

Focusing on the primary objectives of establishing a safe surrounding as well as an operational availability makes the work of TÜV NORD AG essential in a changing environment. The objective of the session is to have a policy dialogue, bringing together all the views on the e-Mobility issue. A panel discussion will also take place among stakeholders to identify gaps in our knowledge as to the effectiveness of investments in electric cars to serve sustainability and safety goals.

The Symposium provides the opportunity for a productive exchange of ideas about e-Mobility with representatives of the EU as well as companies and organisations from the energy, technical and environmental sectors.

We would like to welcome you to our e-Mobility Symposium!

Dr. Klaus Kleinherbers  
Member of the Board of Management of TÜV NORD AG  
and General Manager of TÜV NORD Mobilität
